The authors report a case of rhabdomyosarcoma of the bladder in a 28-year-old male. In February 1985, he presented a left costovertebral syndrome secondary to a cystitis in a two-month history. The cystoscopy revealed a bladder tumour in the dome of the bladder. Urography revealed a hydroureter. The biopsies were inconclusive. A laparotomy and a hemicyectomy were performed. Histology revealed a high grade (rhabdomyosarcoma) sarcoma infiltrating the bladder wall and the perivesical soft tissues. The ureter was invaded. En-bloc excision and ureterosigmoid anastomosis was performed. A high dose salvage chemotherapy was administrated. He died 2 months later after se
